1. Introduction

Depending on the crops grown, at times supplemental lighting is essential. Each lighting design and layout is custom designed for each client, each range, and each crop. Whether one or one thousand fixtures are needed, Rough Brothers will customize the fixture and layout for you.

Light distribution, especially when using supplemental lighting, is imperative to your growing success. Whether it be a metal halide or high pressure sodium fixture, an array of reflectors are offered for each model, regardless of wattage.

Lights are available with optional remote ballast (power supply switch).
